Christine Cheng
Hackensack Meadowlands Development Commission
2 Dekorte Park Plaza
Lyndhurst, New Jersey 07071

Dear Ms. Cheng:

As per your request, I have enclosed the data summaries from the Remedial Investigation currently being conducted at the Scientific Chemical Processing Site (SCP) in Carlstadt, New Jersey. The enclosed data was submitted to EPA by Dames & Moore, consultant to the Responsible Parties who are financing the Remedial Investigation and Feasibility Study at this site. EPA did take split samples to be analyzed independently; our data is still undergoing quality assurance review and will be available within the next month.

As I explained to you, data from the Remedial Investigation was originally expected to be available in November, 1987, but due to laboratory errors, Dames & Moore had to resample the soil, water and sediments at the site. The enclosed package contains the data from the resampling, as well as the original water samples collected in July, 1987.

If you have any questions regarding the enclosed data or the SCP site in general, please feel free to call me at (212) 264-0613.

Sincerely yours,

Janet C. Feldstein, Environmental Engineer
Site Compliance Branch
